

Tropical Storm EIGHTEEN W QuickLook
Posted: 14:00 CHST 09/30/2009

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

No further QuickLooks will be posted for this storm unless oceanographic conditions warrant and/or the [National Hurricane Center \(NHC\)](#) (or [JOINT TYPHOON WARNING CENTER \(JTWC\)](#)) issues a new Tropical Storm Warning for the U.S. (or U.S. Territories) Coastline.

As of 14:00 CHST, water levels at Guam are slightly elevated above predictions and appear to be returning to normal levels. Water levels at Apra Harbor and Pago Bay are currently between 0.4 and 0.7 feet above predictions. Winds are currently 5 knots or less. While barometric pressure is becoming stable and slightly rising.

Water Level and Meteorological plots available below are updated automatically. Water level predictions relative to [Mean Lower Low Water](#) are:

Guam (Apra Harbor) : Next predicted high tide is 2.18 ft (0.65 m) at 09/30/2009 17:54 CHST.

Pago Bay, Guam: Next predicted high tide is 1.59 ft (0.48 m) at 09/30/2009 17:33 CHST

For additional data, please see the [Center for Operational Oceanographic Products & Services](#) website. For more information or archived products and reports, please see the [Storm QuickLook](#) Homepage.
